

WhatsApp Support Gateway - Video Recording Teleprompter

Silent-recording pacing guide with exact hold times per action for post-recording voiceover sync.

4-MINUTE RECORDING GUIDE (MATCHING YOUR SCREEN RECORDING):

- **Natural & Calm Pacing:** You have ~15 to 30 seconds per step, giving you plenty of time to speak clearly without rushing.
- **Phone Number Identity:** WhatsApp identifies callers by phone number. Customers never need to log in or create an account.
- **Phone Selector in Header:** Use the phone dropdown at the top to simulate different customers (Single Order: 15551234567, Multi-Package: 15557778899, New Customer: 15550000000).
- **Live Telemetry Dashboard:** The panel on the right shows response times (under 20ms), message security checks, bot logic, and live server logs.
- **Real-World Customer Scenarios:** Single order (1-tap), multiple packages (buttons), brand-new customer, gift/cross-phone security check, PDF returns, Shopify sync, and live human handoff.
- Total video runtime: **~4 minutes 10 seconds** (250 seconds).

STEP 0: INTRO, PHONE IDENTITY & TELEMETRY DASHBOARD [■■ 0:00 - 0:25 | 25s]

■ ACTION:

Hover mouse over phone on the left, point to Simulated Phone in the top bar, then point to Telemetry Dashboard on the right.

■ ON SCREEN:

Browser at localhost:8000/demo. Left: WhatsApp simulator. Top: Phone presets. Right: Live dashboard showing sub-20ms speed, security checks, bot state, and real-time server logs.

■■ SPOKEN SCRIPT (VOICEOVER: 0:00 - 0:25):

"Welcome to the WhatsApp Support Gateway demo. In this project, I built an automated customer service system for e-commerce stores on WhatsApp. On the left is our WhatsApp mobile simulator. At the top, we have a phone number selector, which lets us test different customer numbers. And on the right is our live telemetry dashboard, which monitors response times, message security, and real-time server logs."

STEP 1: SINGLE ORDER AUTO-LOOKUP (ZERO TYPING) [■■ 0:25 - 0:45 | 20s]

■ ACTION:

With simulated phone 15551234567, click button: ■ Track Order (or type Track).

■ ON SCREEN:

Message sent. Blue checkmarks appear, typing indicator blinks, and bot instantly returns tracking for order #ORD-1001 with FedEx tracking.

■■ SPOKEN SCRIPT (VOICEOVER: 0:25 - 0:45):

"First, notice how customer identity works. In real life, WhatsApp verifies the caller's phone number with every message. So when the customer taps 'Track Order', the system looks up their number in the database automatically. Notice the blue checkmarks and typing indicator—their FedEx tracking details appear in under a second without them ever having to type an order number."

STEP 2: CONVERSATIONAL MEMORY & RETURN POLICY [■■ 0:45 - 1:05 | 20s]

■ ACTION:

Click chip: 2. Can I return it? (or type Can I return it?).

■ ON SCREEN:

Bot remembers order #ORD-1001. Because the package is in transit, it explains delivery is required before return.

■■ SPOKEN SCRIPT (VOICEOVER: 0:45 - 1:05):

"Next, the bot has conversational context. When the customer asks 'Can I return it?', the bot remembers that they are talking about order ten-oh-one. Because this order is still on the delivery truck, the bot explains our store policy: an item has to be delivered before you can start a return."

STEP 3: MULTI-PACKAGE CUSTOMER (INTERACTIVE BUTTONS) [■■ 1:05 - 1:30 | 25s]

■ ACTION:

Click purple chip: ■ Demo: Multi-Package, then tap interactive button [■ #ORD-1004].

■ ON SCREEN:

Bot finds 2 active packages for phone 15557778899. Tapping #ORD-1004 instantly pulls up live DHL tracking details.

■■ SPOKEN SCRIPT (VOICEOVER: 1:05 - 1:30):

"Now, what if a customer has more than one package on the way? Here we switch to a customer who has two active orders. When they tap 'Track Order', instead of getting confused, the bot lists both packages as clickable buttons: order ten-oh-four and order ten-oh-five. Tapping order ten-oh-four instantly pulls up its live DHL tracking status and estimated delivery date."

STEP 4: BRAND NEW CUSTOMER (0 ORDERS ON FILE) [■■ 1:30 - 1:55 | 25s]

■ ACTION:

In top dropdown, select: New Customer (0 Orders) (15550000000), click ■ Reset Session, then tap ■ Track Order.

■ ON SCREEN:

Bot gracefully replies that no orders were found under this WhatsApp number and invites them to enter an order number.

■■ SPOKEN SCRIPT (VOICEOVER: 1:30 - 1:55):

"What happens if a brand new customer messages us? We select our new customer number with zero orders on file. The bot handles this gracefully: it lets them know no orders were found under this WhatsApp number, and invites them to type an order number in case they used a different phone or email at checkout."

STEP 5: GIFT ORDER & 4-DIGIT SECURITY PIN [■■ 1:55 - 2:20 | 25s]

■ ACTION:

In top dropdown, switch back to: Single Order (ORD-1001).
Click chip 3. Track #ORD-1002, then chip 4. Verify: 6543.

■ ON SCREEN:

Bot intercepts query for another phone's order, asks for last 4 digits. Entering 6543 confirms identity and unlocks the order status.

■■ SPOKEN SCRIPT (VOICEOVER: 1:55 - 2:20):

"Sometimes someone buys a gift or uses a different phone. If a customer asks about an order belonging to another number, our security system steps in. To protect privacy, it asks for the last four digits of the phone number on that order. Once the customer enters six-five-four-three, the bot verifies their identity and displays the order status."

STEP 6: DELIVERED RETURN & INSTANT PDF SHIPPING LABEL [■■ 2:20 - 2:50 | 30s]

■ ACTION:

Click chip 5. Return #ORD-1003, chip 6. Verify: 2233, then click the PDF Card in the phone.

■ ON SCREEN:

Bot verifies delivered order, approves return, and attaches a downloadable PDF label. Clicking opens the vector PDF label with a scannable barcode.

■■ SPOKEN SCRIPT (VOICEOVER: 2:20 - 2:50):

"Now let's look at returns. Order ten-oh-three has already been delivered. The bot confirms return eligibility, approves it, and generates a printable return label right inside WhatsApp. Clicking the document card opens a ready-to-print vector PDF shipping label, complete with a scannable barcode and return instructions."

STEP 7: LIVE SHOPIFY STORE SYNC [■■ 2:50 - 3:10 | 20s]

■ ACTION:

(Return to demo tab) Click chip: 7. Shopify #1001.

■ ON SCREEN:

Telemetry logs ShopifyOrderAdapter. Bot displays live item names, prices, and fulfillment status directly from Shopify.

■■ SPOKEN SCRIPT (VOICEOVER: 2:50 - 3:10):

"The gateway also connects directly to Shopify. With a single setting, the bot queries Shopify's live store data, returning exact item names, pricing, and fulfillment stages in real time."

STEP 8: HUMAN SUPPORT & LIVE 2-WAY CHAT [■■ 3:10 - 3:40 | 30s]

■ ACTION:

Click chip 8. Talk to Human. In phone, type Where is my refund? (bot stays silent). In Operator Station, type reply and click Send as Agent.

■ ON SCREEN:

Bot mutes immediately. Customer's message streams to Operator Station. Agent's reply appears in WhatsApp with an **Agent Sarah** badge.

■■ SPOKEN SCRIPT (VOICEOVER: 3:10 - 3:40):

"When a customer needs human help, they simply tap 'Talk to Human'. The bot mutes itself immediately so it won't interrupt, and opens our live Operator Station on the right. Notice that when the customer sends another message, the bot stays completely silent—no automated spam. The agent types back from the dashboard, and their reply appears instantly on WhatsApp with an Agent badge."

STEP 9: RESOLVING & UNMUTING THE BOT [■■ 3:40 - 3:55 | 15s]

■ ACTION:

Click button: Unmute Bot / Resolve.

■ ON SCREEN:

Operator Station closes. Session state turns back to green **ACTIVE_BOT**.

■■ SPOKEN SCRIPT (VOICEOVER: 3:40 - 3:55):

"Once the issue is solved, the agent clicks 'Unmute Bot'. The session returns to automated bot mode, ready for future customer questions."

STEP 10: PRODUCTION RIGOR & 103 AUTOMATED TESTS [■■ 3:55 - 4:10 | 15s]

■ ACTION:

Switch to terminal window and run: `uv run pytest`.

■ ON SCREEN:

All 103 automated tests pass green in under 1.6 seconds.

■■ SPOKEN SCRIPT (VOICEOVER: 3:55 - 4:10):

"Finally, everything is backed by automated tests. In the terminal, running pytest shows all 103 unit and integration tests passing in under two seconds. Thank you for watching!"

Master Quick-Reference Cheat Sheet (4-Minute Pacing)

Action (Click / Type)	■ Time	What Happens on Screen	Voiceover Script (To Read Aloud)
Hover mouse over phone on the left, point to Simulated Phone in the top bar, then point to Telemetry Dashboard on the right.	0:00 - 0:25 (25s)	Browser at localhost:8000/demo. Left: WhatsApp simulator. Top: Phone presets. Right: Live dashboard showing sub-20ms speed, security checks, bot state, and real-time server logs.	"Welcome to the WhatsApp Support Gateway demo. In this project, I built an automated customer service system for e-commerce stores on WhatsApp. On the left is our WhatsApp mobile simulator. At the top, we have a phone number selector, which lets us test different customer numbers. And on the right is our live telemetry dashboard, which monitors response times, message security, and real-time server logs."
With simulated phone 15551234567, click button: ■ Track Order (or type Track).	0:25 - 0:45 (20s)	Message sent. Blue checkmarks appear, typing indicator blinks, and bot instantly returns tracking for order #ORD-1001 with FedEx tracking.	"First, notice how customer identity works. In real life, WhatsApp verifies the caller's phone number with every message. So when the customer taps 'Track Order', the system looks up their number in the database automatically. Notice the blue checkmarks and typing indicator—their FedEx tracking details appear in under a second without them ever having to type an order number."
Click chip: 2. Can I return it? (or type Can I return it?).	0:45 - 1:05 (20s)	Bot remembers order #ORD-1001. Because the package is in transit, it explains delivery is required before return.	"Next, the bot has conversational context. When the customer asks 'Can I return it?', the bot remembers that they are talking about order ten-oh-one. Because this order is still on the delivery truck, the bot explains our store policy: an item has to be delivered before you can start a return."
Click purple chip: ■ Demo: Multi-Package, then tap interactive button [■ #ORD-1004].	1:05 - 1:30 (25s)	Bot finds 2 active packages for phone 15557778899. Tapping #ORD-1004 instantly pulls up live DHL tracking details.	"Now, what if a customer has more than one package on the way? Here we switch to a customer who has two active orders. When they tap 'Track Order', instead of getting confused, the bot lists both packages as clickable buttons: order ten-oh-four and order ten-oh-five. Tapping order ten-oh-four instantly pulls up its live DHL tracking status and estimated delivery date."
In top dropdown, select: New Customer (0 Orders) (15550000000), click ■ Reset Session, then tap ■ Track Order.	1:30 - 1:55 (25s)	Bot gracefully replies that no orders were found under this WhatsApp number and invites them to enter an order number.	"What happens if a brand new customer messages us? We select our new customer number with zero orders on file. The bot handles this gracefully: it lets them know no orders were found under this WhatsApp number, and invites them to type an order number in case they used a different phone or email at checkout."
In top dropdown, switch back to: Single Order (ORD-1001). Click chip 3. Track #ORD-1002, then chip 4. Verify: 6543.	1:55 - 2:20 (25s)	Bot intercepts query for another phone's order, asks for last 4 digits. Entering 6543 confirms identity and unlocks the order status.	"Sometimes someone buys a gift or uses a different phone. If a customer asks about an order belonging to another number, our security system steps in. To protect privacy, it asks for the last four digits of the phone number on that order. Once the customer enters six-five-four-three, the bot verifies their identity and displays the order status."
Click chip 5. Return #ORD-1003, chip 6. Verify: 2233, then click the PDF Card in the phone.	2:20 - 2:50 (30s)	Bot verifies delivered order, approves return, and attaches a downloadable PDF label. Clicking opens the vector PDF label with a scannable barcode.	"Now let's look at returns. Order ten-oh-three has already been delivered. The bot confirms return eligibility, approves it, and generates a printable return label right inside WhatsApp. Clicking the document card opens a ready-to-print vector PDF shipping label, complete with a scannable barcode and return instructions."
(Return to demo tab) Click chip: 7. Shopify #1001.	2:50 - 3:10 (20s)	Telemetry logs ShopifyOrderAdapter. Bot displays live item names, prices, and fulfillment status directly from Shopify.	"The gateway also connects directly to Shopify. With a single setting, the bot queries Shopify's live store data, returning exact item names, pricing, and fulfillment stages in real time."
Click chip 8. Talk to Human. In phone, type Where is my refund? (bot stays silent). In Operator Station, type reply and click Send as Agent.	3:10 - 3:40 (30s)	Bot mutes immediately. Customer's message streams to Operator Station. Agent's reply appears in WhatsApp with an Agent Sarah badge.	"When a customer needs human help, they simply tap 'Talk to Human'. The bot mutes itself immediately so it won't interrupt, and opens our live Operator Station on the right. Notice that when the customer sends another message, the bot stays completely silent—no automated spam. The agent types back from the dashboard, and their reply appears instantly on WhatsApp with an Agent badge."
Click button: Unmute Bot / Resolve.	3:40 - 3:55 (15s)	Operator Station closes. Session state turns back to green ACTIVE_BOT.	"Once the issue is solved, the agent clicks 'Unmute Bot'. The session returns to automated bot mode, ready for future customer questions."

Switch to terminal window and run: <code>uv run pytest</code> .	3:55 - 4:10 (15s)	All 103 automated tests pass green in under 1.6 seconds.	<i>"Finally, everything is backed by automated tests. In the terminal, running pytest shows all 103 unit and integration tests passing in under two seconds. Thank you for watching!"</i>
